

Assumption University
Department of Computer Science

Course Outline
CSX3004 Programming Languages
Semester 1/2024

Course status: Major required course 3 credits
Pre-requisite: CSX3002 Object-Oriented Concepts and Programming

Instructor: Dr. Songsak Channarukul
Office: MSM 0401(23)
E-mail: songsak@gmail.com

Class Meeting: Sec. 541 Tue.13.30-16.30 hrs.
Sec. 542 Fri. 13.30-16.30 hrs.
Office Hours: Tue. 9.00-12.00 hrs., 16.30-17.00 hrs.
Wed. 9.00-12.00 hrs.

Textbooks:

Modern Programming Languages: A Practical Introduction (Second Edition). Adam Webber. Franklin, Beedle & Associates, 2010.

Seven Languages in Seven Weeks: A Pragmatic Guide to Learning Programming Languages. Bruce Tate. Pragmatic Programmers, LLC. 2010.

Course Description:

A study of the computer programming languages on comparative basis with special consideration on syntax, semantics, and implementation, emphasizing the suitability of programming languages for various data manipulations and situations. The topics include bindings, type checking, visibility rules, abstract data type, object oriented constructs and exception handling.

Course Objectives:

Students will learn three main programming language's paradigms: functional, object-oriented, and logical. They will be able to write programs in ML, Java, and Prolog. They will understand the main concepts and characteristics of each paradigm. Six additional programming languages will be assigned so that students are exposed to other languages and learn how learn new programming languages quickly. They will be able to compare programming languages and choose the proper language to solve real-world problems.

Schedule:

Week	Topic	Reading
1	Course Administration	
	Introduction	Ch. 1
2	Program Syntax	Ch. 2
	Syntax and Semantics	Ch. 3
3	Language Systems	Ch. 4
	Introduction to ML	Ch. 5
4	Types	Ch. 6
	ML Patterns and Nested Functions	Ch. 7
5	Polymorphism	Ch. 8
	Higher-Order Functions	Ch. 9
6	Scope	Ch. 10
	ML Data Types	Ch. 11
7	Memory Locations for Variables	Ch. 12
8	Introduction to Java	Ch. 13
	Memory Management	Ch. 14
	MIDTERM EXAMINATION (Ch. 1-12)	
9	Java Classes	Ch. 15
	Object Orientation	Ch. 16
10	Exceptions	Ch. 17
	Parameters	Ch. 18
11	Introduction to Prolog	Ch. 19
12	Procedural Prolog	Ch. 20
13	Cost Models	Ch. 21
14	Project Presentation	
15	Project Presentation	
	FINAL EXAMINATION (Ch. 1-21)	

Grading:

Class discussion, Quizzes, Assignments	15%
Term Project and Report	25%
Midterm Examination	25%
Final Examination	35%

Students are expected to read the textbook or lecture notes before they come to class. There will be a quiz at the beginning of each class. Questions will cover material in the required reading of that class. Each quiz will last about 5-10 minutes. Therefore, students should be on time or they will miss the quiz.
